Carroll Shelby was an early pioneer in high performance street trucks, beginning with his first production version almost 30 years ago. With the tremendous demand for the off-road focused Shelby F-150, fans of the classic Ford Lightning and our first generation Shelby F-150 Super Snake clamored for a new generation muscle truck from Shelby.

Based on the world-class Ford F-150, Shelby American collaborated with industry leading partners to transform it into a Super Snake. True to Carroll Shelby’s philosophy, it has more power, more sound, more styling and more handling prowess. From Detroit to Dubai and Dusseldorf, this is the ultimate expression of a high performance truck available through a dealer.

Shelby’s ‘Super Snake’ badge continues to convey tremendous prestige; every vehicle that wears it represents the pinnacle of Shelby performance. With sharpened handling underpinning the Super Snake’s 770 horses, and the pickup’s sheetmetal reflecting pure American styling (there is perhaps nothing more American than a performance pickup), the F-150 Super Snake is a remarkable visual – and visceral – statement.

Creating that ‘visual’ is a dynamic design mix. Shelby ‘retro’ chrome wheels, wrapped in 305/45 performance rubber, underscore the truck’s performance, while Shelby’s ground effects package provide the exclamation point. And, as expected, the pickup benefits from styling cues such as Shelby Super Snake stripes and badges. Inside the theme continues across the seats, dash and floor.

Shelby American will produce 250 units for the US market for the 2020 model year. For more information on owning a Super Snake call us today or visit www.SHELBY.com for more information.

770HP Supercharged MSRP USD$102,805
